

Product Care Instructions for AirLounge

Thank you for selecting our AirLounge products. To ensure of an optimal experience and prolong the lifespan of your AirLounge products, please follow the following recommendations:

STORAGE:

- Always store the AirLounge in a dry environment away from direct sunlight.
- Opt for a climate-controlled storage environment, with suggested temperatures between 60°F and 95°F.
- After usage, refrain from storing the AirLounge if it is not fully dry. Prolonged exposure to water can lead to the deterioration of the TPU bladder, causing mold, mildew, and slow hydrolysis.

USE:

- Avoid over-inflation and do not exceed 3psi.
- Utilize a fully enclosed fabric cover over the TPU bladder to prevent scratches and abrasions. If any tears, holes, or rips are noticed in the fabric cover, replace it immediately. Also, inspect the TPU bladder for any visible damage.
- We recommend usage when temperatures are between 68°F and 90°F to prevent elasticity issues with the TPU bladder.
- Refrain from using the product in weather conditions such as rain, snow, or humid environments to avoid water contact. Prolonged exposure to water can lead to mold, mildew, and slow hydrolysis of the TPU bladder.
- If the fabric cover becomes wet, remove it and allow it to dry completely before placing it back on the TPU bladder or storing it. Mold and mildew can deteriorate both the fabric cover and TPU bladder.
